ERADICAT 1080 FERAL CAT BAIT

ACTIVE CONSTITUENT:

0.18g/kg SODIUM FLUOROACETATE (1080)

EACH BAIT CONTAINS 4.5mg SODIUM FLUOROACETATE (1080)

An aid in the control of feral cats

**RESTRICTED CHEMICAL PRODUCT – ONLY TO BE SUPPLIED TO OR USED BY AN
AUTHORISED PERSON**

**THIS PRODUCT MUST BE USED IN ACCORDANCE WITH THE LABEL INSTRUCTIONS
AND ANY RELEVANT DOCUMENTATION ISSUED WITH STATE/TERRITORY
AUTHORISATION TO USE 1080 PRODUCTS**

**IMPORTANT: READ THE ATTACHED LEAFLET/BOOKLET
BEFORE USE**

Net Contents: 4.25kg (250 baits) 17kg (1000 baits)

Not to be sold separately. Before use read all directions on the outer pack.

DO NOT REUSE THIS CONTAINER FOR ANY PURPOSE

**DEPARTMENT OF PARKS AND WILDLIFE,
64 WEIR ROAD, HARVEY WA 6220**

Emergency Contact Telephone: (08) 9735 1988

BATCH:

DOM:

APVMA No. 65272/50579

STORAGE, TRANSPORTATION AND DISPOSAL:

Only authorised personnel can have access to baits. Baits must be transported and stored in such a way that unauthorised personnel cannot have access to baits. Only purchase the number of baits required for a baiting program. Unless approved by the relevant State/Territory authority, users must not store baits after a baiting campaign is complete. Baits not used in the campaign must be buried. Safe storage is the responsibility of all persons who are supplied with this poison. The pesticide is only to be kept or stored in the container, and bearing this APVMA-approved label, as supplied by the manufacturer. Do not store the bait in a position accessible to children, livestock or domestic pets. Do not allow baits to contaminate foodstuffs, or feed, for human or non-target animal consumption. Transport only in original container and ensure packaging is secure. Secure baits from unauthorised persons and non-target animals at all times. *ERADICAT* baits will be subject to some degree of breakdown or deterioration during storage. Baits should be used on a 'first in – first out' basis. Empty containers should not be burnt. DO NOT re-use containers for any other purpose. Puncture and bury empty containers in a local authority landfill. If no landfill is available, bury the containers below 500mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers should not be burnt. At the conclusion of the approved baiting period, all unused and unconsumed baits must be disposed of by burial at least 500mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots.

Product can be stored up to 12 months frozen; product must be used within 4 days once it is removed from frozen storage.

SAFETY DIRECTIONS:

Very dangerous. Poisonous if swallowed. When opening the container and using baits wear elbow-length PVC gloves. If product on skin, immediately wash the area with soap and water. After use and before eating, drinking or smoking, wash hands, arms, and face thoroughly with soap and water. After each day's use, wash gloves and contaminated clothing.

FIRST AID:

Speed in treatment is essential.

If poisoning occurs, contact a doctor or Poisons Information Centre (phone: 13 11 26). If skin contact occurs, remove contaminated clothing and wash skin thoroughly. Remove from the contaminated area. Apply artificial respiration if not breathing. If in eyes, hold eyes open, flood with water for at least 15 minutes and see a doctor.

MATERIAL SAFETY DATA SHEET:

Additional information is listed in the MSDS available from the supplier.

IMPORTANT: READ THE ATTACHED INFORMATION AND INSTRUCTIONS BEFORE USING THIS PRODUCT.

APVMA No. 65272/50579

DIRECTIONS FOR USE:

Restraints:

Use restricted to fauna conservation programs on lands managed by or in agreement with the Department Of Parks and Wildlife; use restricted to Western Australia.

DO NOT feed baits to non-target animals including birds.

DO NOT apply baits to, or in, crops which are in mid to late developmental stages.

DO NOT apply baits to, or in, crops if contamination of produce is likely to occur.

DO NOT contaminate dams, rivers, streams, waterways or drains with the product or used containers.

DO NOT bait in areas where Northern Quoll or their habitat may be present.

For aerial baiting DO NOT apply baits to the same area more than once per calendar year.

In accordance with Poison (Section 24) (Registered Pesticide 1080) Notice 2000, made under the *Poisons Act 1964*, 1080 poison baiting can only be undertaken with the approval of the Chief Executive Officers of authorised departments (Agriculture and Food Western Australia and Parks and Wildlife). Only the Chief Executive Officers (or officers delegated in writing) can approve the distribution of 1080 baits to other persons, subject to those persons having received adequate training. A formal assessment of risks to humans, domestic animals and wildlife must be undertaken before baiting is considered.

OPERATIONAL CONDITIONS

For aerial baiting, baits should be dispersed at a density of 25-50 baits/km².

For ground baiting, unless placement is otherwise specified by State/Territory requirements, individual baits should be placed on the surface of the ground at intervals of at least 200 metres at marked sites; the rates of lay for ground baiting must not exceed 10 baits per square kilometre.

The most effective cat control is during winter in temperate zones. At this time food demands are high. Numbers will only be temporarily reduced by baiting as new animals will move to replace resident animals which have been killed. Consequently repeat baiting may be required.

Distance Restrictions

Ground baiting:

Baits must be placed at least 150 metres from a dwelling; 20 metres from permanent of flowing water bodies; 5 metres from boundary fences; and 5 metres from the edge of formed public roadways or as specified by State/Territory.

Aerial baiting:

For aerial baiting programs, in addition to the ground baiting distance restrictions, baits must be placed at least 500 metres from all property boundaries and constructed recreation sites, and 250 metres from the edge of formed/gazetted public roadways or as specified by State/Territory.

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.

THIS PRODUCT IS NOT TO BE USED IN DOMESTIC OR HOME GARDEN SITUATIONS.

GENERAL INSTRUCTIONS

Neighbour Notification

Neighbours must be notified to allow them to take appropriate action. The notification must advise that steps (e.g. restraint, muzzling) need to be taken to ensure that farm dogs and Domestic animals, particular dogs and cats do not gain access to 1080 baits or poisoned animals. The notification must specify the dates between which baiting will occur. This notification should be in writing and should be given to all adjoining landholders at least 72 hours in advance except where alternative communication arrangements have been made that meet State/Territory requirements and overall safety criteria.

A record of the notifications must be kept.

Baiting must commence within ten days of notification or else another three days notice of intent to lay baits is required, advising the revised particulars.

Signage

Signage is compulsory for all lands where baiting occurs. Do not lay baits until signage is in place. Signage must include – date baits laid, contact numbers, toxin name, target animal(s) and a warning that domestic animals and pets can be affected.

Approved users must ensure that signs are put up immediately before 1080 poisoning operations commence on the property and are placed according to requirements specified by the relevant State/Territory. Signs must be maintained for at least 4 weeks after the authorised period of bait lay has expired or after all untaken baits have been collected.

Precautions

DO NOT apply baits to, or in, crops which are in mid to late developmental stages.
DO NOT apply baits to, or in, crops if contamination of produce is likely to occur.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT:

DO NOT contaminate dams, rivers, streams, waterways or drains with the product or used containers.

DO NOT feed baits to non-target animals including birds.

Information on non-target animal distribution, conservation status, habitat preference, diet, tolerance to 1080, body weight and size of home range can be used to reduce poisoning risks posed by baiting programs. Time baiting when non-target species are least active or least susceptible. This product may be toxic to some birds and other native wildlife. Baits should not be laid at times when, or in locations where, birds or other non-target wildlife are likely to be harmed by them. Bait placement and/or bait station design should be such that non-target access is minimised. This product may be toxic to some marsupial carnivores. Where appropriate, potential risks should be reduced, by correct bait placement, selection of the minimum effective rate and avoidance of baiting during the main breeding season.

To the extent possible, untaken baits should be removed after 10 days (or as per relevant State/Territory baiting program requirements). To the extent possible, animal carcasses should be recovered during and for 14 days after a baiting campaign. Untaken baits and animal carcasses should be destroyed by burning or burial according to the requirements of the State/Territory in which use has occurred. Any incidents where it is suspected that non-target animals may have been poisoned by 1080 should be notified to State/Territory authorities. Incidents involving Northern Quoll, Woolley's pseudantechinus, common planigale or red-tailed phascogale MUST also be reported to the APVMA.

PROTECTION OF DOMESTIC ANIMALS AND FARM DOGS

Steps (e.g. confine, restrain, muzzling) need to be taken to ensure that farm dogs and domestic animals, particularly dogs and cats do not gain access to 1080 baits or poisoned animals. In the event of accidental poisoning see immediate veterinary assistance.

STORAGE, TRANSPORTATION AND DISPOSAL:

Only authorised personnel can have access to baits. Baits must be transported and stored in such a way that unauthorised personnel cannot have access to baits. Only purchase the number of baits required for a baiting program. Unless approved by the relevant State/Territory authority, users must not store baits after a baiting campaign is complete. Baits not used in the campaign must be buried. Safe storage is the responsibility of all persons who are supplied with this poison. The pesticide is only to be kept or stored in the container, and bearing this APVMA-approved label, as supplied by the manufacturer. Do not store the bait in a position accessible to children, livestock or domestic pets. Do not allow baits to contaminate foodstuffs, or feed, for human or non-target animal consumption. Transport only in original container and ensure packaging is secure. Secure baits from unauthorised persons and non-target animals at all times. ERADICAT baits will be subject to some degree of breakdown or deterioration during storage. Baits should be used on a 'first in – first out' basis. Empty containers should not be burnt. DO NOT re-use containers for any other purpose. Puncture and bury empty containers in a local authority landfill. If no landfill is available, bury the containers below 500mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers should not be burnt. At the conclusion of the approved baiting period, all unused and unconsumed baits must be disposed of by burial at least 500mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots.

SAFETY DIRECTIONS:

Very dangerous. Poisonous if swallowed. When opening the container and using baits wear elbow-length PVC gloves. If product on skin, immediately wash the area with soap and water. After use and before eating, drinking or smoking, wash hands, arms, and face thoroughly with soap and water. After each day's use, wash gloves and contaminated clothing.
